

Teacher key

Stalkerware, lesson 17. Timing, answers, and what to do when something comes up.

NOT FOR STUDENTS
90 MIN • 2-5 STUDENTS

Your role

- Start the timer for each task and say “next task”. The worksheet tells students what to do and what to post.
- Read the chat and check posted answers against this key. Answer with “OK” or “check number 3 again”. Let students find the reason themselves.
- Keep language corrections for the end of the lesson (see Language, page 2).

Before class — 15 to 20 minutes

- Do Tasks 1, 2 and 3 yourself and check them against this key (10 min).
- On your own phone, open the places listed in Task 4 (5 min). Menu names depend on the brand and the Android or iOS version. Know where the search bar in Settings is.
- Send the worksheet 5 minutes before the lesson and have a timer ready. Nothing else to prepare.

Timeline

Time	Part	What you do
0:00 – 0:05	Start	Check who is present. Students open the sheet. Point to “Before you start”.
0:05 – 0:13	Reading	Silent reading. For unknown words, students use the Key words box or a translator.
0:13 – 0:18	Task 1	True / false / not given. Students post “1 T, 2 F, ...”.
0:18 – 0:28	Task 2	Is it stalkerware? Students post A–D. Use the last 3 minutes for situation D.
0:28 – 0:40	Task 3	Red flags. Students post the flag counts.
0:40 – 1:05	Task 4	Students check their own phones. You only read the chat.
1:05 – 1:20	Task 5	Help a friend. Read the messages in the chat.
1:20 – 1:23	Task 6	Each student posts one sentence.
1:23 – 1:30	Buffer	Late arrivals, overrun, language feedback.
not timed	Video	Optional page 6. Give it as homework, or use it in class if the group finishes early. Answers on page 5.

Short of time? Cut in this order: all “+ Extra” items, Task 6, checks 5 and 6 in Task 4, the discussion of situation D. Students can finish Task 4 at home.

Attendance

- **2 students:** no changes. Both do every task. Give the extras to the faster student.
- **3–5 students:** no changes. For situation D and the extras, give each student one question and let the others reply to it. In Task 3 you can give each student two rows of the table, then everyone posts and compares.
- **Late student:** send the sheet, tell them the current task number. They skim the text and join in.
- **No phone, or a work phone:** the student does the account check at the end of Task 4.

If a student finds something

- Students post only counts, never app names. If someone writes that they found something, reply “noted, we continue” and do not ask for details in the group.
- A “Look” is not proof. VPN apps, password managers, accessibility tools, smartwatch apps and work-profile apps often appear in these lists.
- Do not ask anyone to delete anything during the lesson. After class, in private, point to stopstalkerware.org. In Poland: Niebieska Linia, 800 120 002 (free, 24 hours).

Language

- Main language: present simple for describing how things work (Tasks 1–3), imperatives and “Don't ...” (Task 5), “because” for reasons, “First / Then / After that” for order. A2 students can build their Task 5 reply from the chosen options.
- Do not correct during Task 4. Collect 3 or 4 mistakes that repeat in the chat and show them, without names, in the last 5 minutes.

Task 1 — answers

#	Answer	Sentence in the text
1	T	“... the phone's location ...” (what the app sends)
2	F	“Stalkerware is not in the official app store, so they install it from a file.”
3	T	“On an Android phone, they usually need the phone and the PIN for a few minutes.”
4	T	“On an iPhone, they sometimes need only the email and password ... not the phone.”
5	F	“It often has no icon.” The text says often, not always.
6	F	“Those apps are visible, and the people who use the phone know about them.” (work-phone apps and normal parental-control apps)
7	NG	The text gives no numbers.

+ EXTRA — MODEL ANSWER

A normal parental-control app is visible and the users know about it, but stalkerware is hidden and the owner does not know about it. (The video adds: some stalkerware is sold as a parental-control app.)

Task 2 — answers

	Owner knows?	App visible?	Owner agreed?	Stalkerware?
A	Y	Y	Y	N
B	Y	Y	Y	N
C	N	N	N	Y
D	discuss	Y	discuss	N

D, question 1. It is not stalkerware: the sharing is visible and it started with consent. But it is still a problem, because Anna does not agree to it any more. Accept “knows” and “agreed” as Y or N if the student gives a reason.

D, question 2. Anna should stop sharing. iPhone: Find My → People, or Settings → Privacy & Security → Safety Check. Android: Google Maps → profile picture → Location sharing. She can also tell Tom.

+ **EXTRA** No single right answer. Accept any reason, for example: the teenager does not know, so trust can break; or a parent is responsible for a young child.

Task 3 — answers

#	App	Flags	Which flags
1	Maps	0	Location matches the job.
2	Quick Calculator	1	F4: a calculator does not need location, microphone or SMS.
3	WhatsApp	0	All permissions match messaging.
4	Wi-Fi Helper	2	F1 (file) and F5 (notification access). Location is normal for a Wi-Fi tool, so no F4.
5	Music Player	0	—
6	System Service	5	F1 file, F2 no icon, F3 system-like name, F4 no job listed, F5 accessibility and device admin.
7	Pocket Bank	0	Camera matches a banking app.
8	Weather	0	Location matches the job.

a) System Service (5 flags). **b)** Wi-Fi Helper and System Service.

+ **EXTRA** Remove the extra permissions (Settings → Apps → the app → Permissions). If it asks for them again, uninstall it.

Task 4 — what normal looks like

There is no key. Students post counts like “Android – 6 checks, 1 to look at”. Use this list only if a student asks what a result means.

System	Usually normal
Android	Play Protect is on. The Accessibility and Device admin lists are empty, or contain tools the student knows (screen reader, password manager, work app). Most apps are “Not allowed” to install unknown apps; a browser or file manager may be “Allowed” if the student installs files by hand. Notification access: smartwatch or car apps.
iPhone	Safety Check lists only people and apps the student chose. The device list shows only their own devices. Two-Factor Authentication is on. No “Profiles” section, or only a work or school profile. Find My → People shows only people the student chose.

Task 5 — answers

Good advice: B, C, E, F, G. Not good: A, D, H.

- **A.** Removing the app can warn the person who watches, and it deletes the evidence. Telling him can make the situation more dangerous.
- **D.** Asking him also warns him.
- **H.** “Spy detectors” from random websites can be scams or spyware themselves.
- **F.** Good, but changing passwords can also show the person that the friend knows. This is why E (a support organisation) is on the list: it helps to plan the order. Accept any order, as long as the reset is not first.

MODEL REPLY, B1–B2

Don't reset your phone yet, because the app can warn him and you can lose the evidence. First, don't message anyone about this on that phone. Then use a different phone or computer to look for help, for example on stopstalkerware.org. Write down the names of the apps and the dates. After that, contact a support organisation or the police. When you have a plan, change your passwords from the safe device and turn on two-factor authentication. If you feel unsafe, call for help immediately.

MODEL REPLY, A2

Don't reset the phone. Use another phone. Write down the app names. Call the police or a support organisation. Then change your passwords.

Task 6

No key. Check the pattern: *This week I will turn on two-factor authentication.* (will + base verb).

The menu paths in Task 4 and the advice in Task 5 come from published guides (Google, Apple, Coalition Against Stalkerware). Menus change with each phone brand and version, so test them on your own phone before the lesson.

Optional video — answers

#	Answer	Where in the video
1	the phone's location, text messages, phone calls, passwords, websites you visit, everything you type. <i>Not</i> : battery level, emails on a laptop.	0:36–0:39, then 1:19–1:22
2	an intimate partner	0:42 “often installed by an intimate partner”
3	a few minutes	1:08–1:09 “in just a few minutes”
4	no app that she does not recognise	1:46 “I don't see any apps that I don't recognize”
5	with	2:05 “It can be done with consent.”
6	work in stealth mode	2:39 “should never operate in stealth mode”
7	Password: every phone. Antivirus scanner: Android or computer. Built-in security check: iPhone.	3:01–3:14

+ **EXTRA** Open question. Eva Galperin's argument: anything legitimate can be done with consent, and deliberately avoiding consent is probably illegal and certainly unethical (2:08–2:16). Accept any view with a reason.

- Students read the questions first, then watch twice. Captions on help the A2 student.
- The auto-captions contain errors: “Eva Gulprin” (Galperin), “M Spy” (mSpy), “monitor kids ABC's”. Tell students not to copy them.
- Also in the video: apps judged to be stalkerware are not in the App Store or Google Play, but are still online. The vendor mSpy advertises an “undetectable” app with an “invisible mode”.
- If sharing sound online fails, send students the link and let them watch alone. Nothing in the lesson depends on the video.

The times come from the transcript's own time marks, not from watching the video. Check them once before using them.
